

## DOMjudge sample problem

### hangman – ‘Hangman’

## Problem description

You are to solve the game ‘hangman’; it should guess the right letter and solve the word(s).

## Input specification

You are given two lines;

- the first containing the all guessed letters, initially empty.
- the second a line containing ‘\_’ & ‘ ‘, where ‘\_’ must be guessed by your program

you can guess any character within the lowercase range ‘a-z’ by outputting that one character. You must only guess a letter once.

## Sample input/output
